INTTELLECTUAL PROPERTY (IPGL)

IPGL 0105. Patent Practice Skills. (2 Credits)
The patent practice skills course provides students with the opportunity to learn and apply fundamental patent law skills to a variety of practical, real-life law firm and business scenarios. Through a series of fact based exercises and complementary text and case law readings, students will analyze a proposed invention, assess patentability, organize a patent procurement strategy including developing a patent specification, claims and related disclosure and prosecution documents. Students will also learn the fundamentals associated with a freedom to operate analysis, basic principles of patent licensing, and patent due diligence protocols in connection with an IP related acquisition. The final module will focus on post grant review procedures including preparation of IPRs, CBMs and PGR Petitions and related strategies in using these procedures. Post grant review tactics will be discussed in the litigation context, and the mechanics of preparing the Petition. The final project will be directed to preparing an inter partes review (IPR) Petition. Students will explore cutting edge patent law issues in a practice-oriented context that will help them not only develop specific patent practice skills, but will help them understand and apply important patent law principles and cases.

Attributes: IPIE, JD, LAW.
Prerequisite: IPGL 0131.

IPGL 0129. Fashion Law and International Trade. (1 Credit)
This course covers various federal laws and regulations affecting the importation into, exportation from, and sale of fashion products in the United States, with comparative reference to other jurisdictions. It provides a practical, step-by-step approach to reviewing and analyzing diverse fashion products (e.g., apparel, footwear, eyewear, jewelry, etc.) to ensure that they comply with the ever-changing legal requirements enforced by numerous agencies. We will discuss topics such as: country of origin determination and marking (including “Made in U.S.A.” claims), tariff classification and duty rates, duty-free and partial-duty trade agreements, valuation, composition/care labeling, product safety/recalls, use of animal products (e.g., skins, feathers, etc.), addressing governmental inquiries, and judicial proceedings and decisions. With 97% of apparel and footwear sold in the United States manufactured abroad, we will also discuss the potential effects of global events (e.g., “Brexit”) and the U.S. administration’s call for the renegotiation of various bi-lateral and multi-lateral trade agreements (e.g. NAFTA, etc.) and/or the implementation of a blanket “border adjustment tax.” We will also examine practical strategies for working with and addressing the unique requirements of members of the fashion industry, including fashion houses, their in-house counsel, and other parties involved in the movement of such goods. 1 credit.

IPGL 0130. Copyright Law. (3 to 4 Credits)
This course examines the law of copyrights including discussions of subject matter, ownership, duration, rights, infringement, fair use and remedies. This course will cover the applicable doctrine and precedents but will also address why and how courts, juries, adversaries and clients approach copyright matters and issues in a real-world sense. The course requires very careful reading of opinions and critical thinking about factors that influence decision-making. Ultimately, students should be able to tell why a case was decided the way it was. This is the first step in predicting what will happen in the next case, and in being able to influence that result. This course will also explore copyright matters in the news. FALL 2019 This course will cover the principal features of U.S. copyright law: what is (and is not) copyrightable subject matter, the originality and fixation requirements for copyright protection, ownership and transfer of rights issues, the scope of protection that copyright law affords to works of authorship, limiting principles, exceptions, and defenses to infringement, standards for judging direct and indirect infringement, and remedies available in copyright lawsuits. Both statutory and common law developments will be considered, as well as neighboring rights such as anti-circumvention rules. Current controversies in the case law and in Congress, as well as generally about the contours of and theoretical underpinnings of copyright and the public domain will be discussed. Comparative copyright law and international treaties affecting copyright law will also be given some attention.

Attributes: IPIF, LAWT, LLM.

IPGL 0131. Patent Law. (2 to 3 Credits)
This course is an introduction to patent law intended both for students intending to focus their practice on patents and for those preparing for a more general commercial practice. Patent law is a fascinating legal topic because of its combination of statutory and common law elements, its international aspects, and the thorny issues that accompany attempts to match the evolution of the law with the evolution of technology. Because of the importance of intellectual property assets and of technology in general, a basic familiarity with patent law is useful in virtually any commercial practice. The course focuses primarily on substantive patent law, including the law governing patentability and the law concerned with enforcing patent rights. A basic introduction to the United States patent system and the respective roles of the US Patent and Trademark Office and the courts will also be given.

Attributes: IPIF, LAW.

IPGL 0135. Intellectual Property Law. (3 to 4 Credits)
This course introduces the basic principles and policies of intellectual property law. Intellectual property is an increasingly important part of the modern economy. It is also an increasingly important area of legal practice, and one with a language and conceptual structure of its own. This course will teach you that language and structure. We will cover the three main areas of IP protection—copyright, patent, and trademark—and will also touch on adjacent areas such as trade secret law and the right of publicity.

Attributes: IPIF, LAWT.
IPGL 0152. Smart Securities and Block-chain Regulation. (2 Credits)<br>Tokenization: Security Tokens ("Smart Securities) and Digital Assets:<br>An examination of the regulatory and legal issues of using blockchain technology in capital markets. <br>Instructor: Donna Redel<br>Guest Lecturer: James Jalil<br>Introduction: Beginning in 2018 and continuing through 2019 the financial applications for digital assets and blockchain use cases have continued to progress. In particular, the industry has moved swiftly to security tokens (i.e. securities represented as blockchain based smart contracts or "tokens") in a move to be "fully compliant" with security regulations. The Securities & Exchange Commission ("SEC") and the Commodity Futures Trading Commission ("CFTC") along with several other regulators have provided some preliminary guidance on how existing regulations apply to this technology. However, the pace of technological development, in the view of many, is outpacing the regulatory framework. Security Tokens (Smart Securities or Digital Assets) are an exciting new blockchain application for the financial system. The adoption of security tokens has the promise of reduced costs, increased transparency and compliance, faster settlement, and the potential for improved liquidity for assets such as real estate, art, and even patents. The move to DeFi or Deregulated Finace is reshaping existing financial institutions and fostering startups. In the course we will discuss the most significant legal and regulatory issues associated with the development and utilization of security tokens. We will cover the history of security tokens, how they are issued, how they trade, how they are regulated and debate many of the "less clear" application of the existing regulatory framework. A brief introduction to blockchain technology and crypto currencies will be included so as to better understand the context as well as technology around Security Tokens.<br>

IPGL 0156. Biotechnology Patents in Food, Drug, and Vaccine Regulations. (2 Credits)<br>There is a thriving biotechnology industry in the United States today and well over 1,450 technology companies developing diagnostic and treatment technologies in medicine, creating more nutritional food and innovating new industrial processes. Yet this 30 billion dollar sector of the economy is not without controversy. The bio in biotechnology comes from living biological entities-people, plants, animals and even bacteria. People are the source of the raw material for the discovery of genes for research, diagnosis and therapy, raising a whole host of issues about rights and responsibilities and societal obligations. Paper required.<br>Attributes: IPIE, LLM.<br>

IPGL 0203. Law Practice Technology. (2 Credits)<br>This course will cover the technological tools of law practice, giving students both an opportunity to use these tools and an understanding of their development. Students will explore case management systems, e-discovery tools, competitive intelligence solutions, firm-specific research portals, and some of the other rapidly evolving applications and devices confronting the 21st-century attorney. "Hands-on" use of these tools will be emphasized. Students will also explore the issues arising from new technological developments in law practice. These topics include new ethics requirements for more technologically savvy attorneys, the implications of technology on client confidentiality, and the automation of Alternative Dispute Resolution. Guest lecturers from local law offices may be invited to showcase examples of the technology adopted in their offices and the accompanying best practices.<br>Attribute: IPIE.<br>

IPGL 0215. Surveillance and Privacy in the Digital Age. (2 Credits)<br>New technologies, from the Internet to cell phones to drones, have re-shaped the world in the past few decades. They have brought new modes of communications and new conveniences—as well as new opportunities for surveillance. This course will explore how the current constitutional and statutory frameworks address surveillance in the digital world and how laws and policies should regulate any threats to privacy posed by the use of emerging surveillance technology.<br>Attributes: CORC, CRCP, IPIE, LAWT.<br>

IPGL 0229. Fashion Modeling Law. (2 to 3 Credits)<br>The seminar will provide a comprehensive overview of the legal, business and societal issues faced by fashion models and their agencies. Topics will include the structural, legal and regulatory constraints within which the industry functions; formation and dissolution of business relationships among fashion models, agencies and clients; intellectual property rights, use and and misuse, and litigation as a remedy; the effect of digital media and social networking on the fashion modeling business; immigration and finance concerns; and the significant social and cultural issues relevant to the industry.<br>Attributes: FASL, LAWB, LAWF, LAWI, LAWT, LIP.<br>

IPGL 0231. Patent Litigation. (2 Credits)<br>The course covers all aspects of patent litigation from pre-filing considerations to appeal and is designed to address problems that arise in real-world lawsuits. Particular attention is devoted to initial pleadings, discovery, motion practice, and the use of technical experts at trial. The role of juries in patent litigation is also discussed, including the recent advent of so-called Markman Hearings. Lastly practical trial preparation techniques, trial practice, and the law of remedies will be explored.<br>Attributes: IPIS, LAWT, LIDR, LLM.<br>

IPGL 0242. Artificial Intelligence in the Legal Industry. (1 Credit)<br>This course will cover how Artificial Intelligence is being deployed in the legal industry and is likely to be used in the near future. Topics include use of Artificial Intelligence in legal drafting, e-discovery, contract management, due diligence, compliance and legal research. Ethical issues as well as standards, legal issues, and practical issues will be discussed. Students will get hands-on experience with various AI enabled tools. (Take-home Exam)<br>

IPGL 0293. Fashion Law. (2 to 3 Credits)<br>This seminar explores the legal substance of style, with emphasis on current issues involving clothing and the global fashion industry. Topics will include the application of intellectual property law to fashion design; counterfeiting and alleged links to organized crime and terrorism; licensing agreements; import/export regulations and quotas; fashion financing; garment district zoning and urban planning; manufacturing and sustainability; consumer protection; sumptuary laws; and civil rights issues related to apparel. Schedule final exam required. If students wish to satisfy the writing requirement, they must complete a 25 page paper in addition to the scheduled final and may receive a 4th credit for the paper.<br>Attributes: FASL, IPIE, LAWB, LAWF, LAWI, LAWT.
IPGL 0299. Intellectual Property Law and Design. (2 Credits)
What do a couture gown and a semiconductor chip have in common? Neither adapts easily to the traditional categories of the intellectual property law system. IP assumes a fundamental division between expression and function, institutionalized in the separate forms of copyright and patent protection. Most of the created objects that we encounter in our daily lives, however – from the buildings in which we live to the clothes we wear to the icons on our computer screens – combine aesthetic, expressive, and functional elements. This seminar explores the concept of design as it relates to intellectual property law, including the domestic and international doctrines and mechanisms that address the perceived gap between art and craft. In the process, we will examine the theoretical underpinnings of IP law itself, along with the ways in which creative industries raging from fashion design to information technology to architecture (and many others) have responded to the challenges of the IP regime. Paper required. Pre- or Co-requisite of either intellectual property law, at least one of the primary courses within the intellectual property field (copyright, patent, trademark), or equivalent professional experience.
Attributes: IPIE, JD, LAWT, LLM.

IPGL 0302. Beyond Intellectual Property. (3 Credits)
The course will explore the interconnection between intellectual property and related subjects, focusing on the challenges of advanced technologies, artificial intelligence (AI), machine learning, robots, Blockchain and cyberspace, on intellectual property, privacy and other legal regimes in the 3A era (autonomous, advanced and automated). Are intellectual property laws relevant when AI systems generate artworks or patents? How do AI systems actually work? Are they really human like? Who should be the owner? Who is (can be) responsible for infringements? Can AI systems be subject to legal rights and obligations? Can regulation, transparency or insurance efficiently control these systems? Why is intellectual property regime important to other fields of autonomous entities (autonomous cars, autonomous weapons and autonomous ADR systems)? The course constitutes novel and non-traditional perspectives of the scholarly discourse between advanced digital technologies and intellectual property laws. Each of the topics will be presented and discussed within the practical challenges as well as the theoretical background and international contexts, in the US and in comparative jurisdictions. Moreover, many of the topics are related to either drafts, suggestions or recommendations of international tools being discussed by leading international organizations, especially WIPO (World Intellectual Property Organization). The course will address, inter alia, the following topics: intellectual property, artificial intelligence, machine learning and robots, Blockchain, 3D printings, the challenges to intellectual property in the digital - cyberspace era and cyberspace privacy, theoretical justifications to intellectual property, the mainstream justifications as well as the hidden justifications, intellectual property rights in the workplace, traditional knowledge, intellectual property and gender, access to knowledge for persons with disabilities, freedom of association of workers from the entertainment sector vs. competition and antitrust laws and many more. The unique character of the course will be the involvement of the students in conducting legal research (US laws, comparative and international and theoretical aspects) and preparing a paper to be published and/or to be submitted (subject to certain limitations) to the relevant international organizations (i.e. WIPO). In this way students will work on research projects that promote innovative recommendations through the design, implementation, and reform of relating conventions and have the opportunity to try to influence policy makers. The students will gain not only knowledge and tools on contemporary advanced technology issues as well as theoretical, international and comparative legal knowledge but also will acquire new ways of thinking and practical legal experience. The students of this course have the option to attend an international seminar in the most important intellectual property international organizations: WIPO in Geneva and the Swiss Institute of Comparative Law in Lausanne, subject to the approval and conditions of the specific organization. Some of the final works will have the option of being published, under certain conditions. The course will include three academic hours of class presentations per week including consulting meetings and discussions with the students regarding their research.
Attribute: LAWT.
IPGL 0304. Trademark Law. (2 or 3 Credits)
This course examines the law of trademarks, right of publicity and related doctrines. The emphasis will be on subject matter, ownership, infringement and remedies. The course will be taught from a legal realist perspective. This means addressing why and how courts, juries, adversaries and clients approach trademark matters and issues in a real-world sense, not just from a legal doctrine perspective. The course requires very careful reading of opinions and critical thinking about factors that influence judicial decision-making. Ultimately, students should be able to tell why a case was decided the way it was. This is the first step in predicting what will happen in the next case, and in being able to influence that result.
Attributes: IPIF, LAWT, LIP.

IPGL 0306. Advanced Trademark Law. (2 Credits)
Prerequisite: Trademark Law, IP Law or permission of the instructor. This is a paper course which may be used to satisfy the writing requirement. The course will start where the basic course in trademark law (IP Law trademark section) left off. It will go deeply into selected areas of trademark law and practice and also address current trademark matters in the news. We will have guest lecturers, including those from trademark practice, the PTO Trademark Trial and Appeal Board, the European IP Office, and the Executive Director of the International Trademark Ass'n.
Attributes: IPIE, JD, LAWT.
Prerequisites: (IPGL 0135 or IPGL 0304).

IPGL 0307. Advanced Copyright Law. (2 or 3 Credits)
Paper required. Satisfies Writing Requirement. An in-depth analysis of selected areas of copyright law. Will have some guest speakers who will discuss copyright issues and practice in specific industries. Can use any copyright casebook you had for a course. Preferred casebook is Copyright Law, Joyce, et al., 9th edition. Prerequisite: Copyright Law or Intellectual Property Law or copyright course in other school, or for LL.Ms, without prerequisite course, experience in copyright law.
Attributes: IPIE, JD, LAWT, LLM.
Prerequisite: IPGL 0130.

IPGL 0320. Art Law. (2 or 3 Credits)
Integrally related to intellectual property, art law encompasses the complexities of international law, contract law, and Constitutional law. This seminar will examine the intersection between the law and the art world, a complex world of individuals, institutions, and expressive works. We will explore some of the legal issues associated with those intersections and relationships. The seminar will examine participants' roles, including artists; art patrons and consumers; art dealers and auction houses; government officials; art experts, such as museums, historians, and critics; as well as the "bad guys," such as forgers, thieves, and looters. We will analyze the relationships between art institutions and those who produce, collect, protect, and "deal" in art. The substance of the course is an exploration of legal issues, including but not limited to, expressive rights, intellectual property, and moral and economic rights. The course will also focus on the international movement of art in times of peace and war, as well as the preservation and protection of antiquities and cultural property. Student evaluation will be based on class participation, a final paper, and the completion of ongoing readings accompanied by short assignments. In addition to class meetings, students will also be required to view films, attend lectures, and visit museums outside of the regularly scheduled class time.
Attributes: IPIE, LAWT.

IPGL 0321. Art Law Practicum. (2 or 4 Credits)
The Art Law Practicum will focus on the relationship between intellectual property and art. Through discussions, assignments, class readings, visual materials, guest speakers, and field trips, this course will examine how copyright, moral rights, trademark, and rights of publicity affect the production and reception of contemporary art. Practical aspects of this course will include issues with interacting, advising, and representing contemporary artists and arts entities who work in and exhibit diverse artistic practices, strategies and media, such as appropriation art, photography, video/film, conceptual art, digital art, and organic materials. This course will also introduce students to major 20th Century and contemporary art movements and theories necessary to understanding contemporary art and law.
Attributes: LAWT, LLM.

IPGL 0322. Programming for Lawyers. (3 Credits)
This course provides an introduction to computer programming using the programming language Python. The ability to program (or "code") will make you better-prepared to understand and advise clients whose businesses rely on technology (which today includes most clients). It will also help you understand how computer programs affect various areas of law such as privacy, antitrust, discrimination, e-discovery, and criminal investigation. There are no prerequisites for the course, and any student should be able to complete the class, which is open only to those with no significant programming experience. Grading will be based on the completion of problem sets assigned more-or-less weekly; there will be no exam. Attendance in class and labs, including the first class and lab, is mandatory. Attendance in the first week is also mandatory for students who are interested in adding the course if slots open up; those students should email the professor before the first class. In addition, both enrolled students and those hoping to enroll must complete the first reading assignment and problem set prior to the first class. That problem set will be ungraded, but completing it, or trying to, is essential to enable you to decide if the course is for you.
Attributes: JD, LAWT, LLM.

IPGL 0329. Fashion Law Practicum. (2 or 3 Credits)
Prerequisite: Submission of an application to the Fashion Law Institute's university email address, fashionlaw@fordham.edu, with the subject header, "Application for Fashion Law Practicum Spring 2018," no later than MONDAY, OCTOBER 1, at noon. The application should consist of a maximum 200-word statement about the applicant's qualifications, a resume, and a transcript. Applications made in person, submitted in hard copy, or sent after the due date will be given lowest priority. Only students who receive notification that they have been accepted to the course will be permitted to register. The Registrar's Office will register accepted students. Please note that acceptance into the course and registration are contingent upon subsequent approval by the fashion house or other fashion-related company, nonprofit organization, or law firm to whom the applicant is assigned for the fieldwork component of the course. The advanced seminar, which consists of both a classroom component and a fieldwork placement, will develop students' skills in the practice of fashion law. Students will complete a series of drafting assignments of increasing complexity, such as a cease-and-desist letter, a licensing agreement, a retail lease, a manufacturing agreement, an employment agreement, a consignment agreement, articles of organization and an operating agreement for a limited liability company, a model release form, sweepstakes rules, website terms of use, and a privacy policy and/or a complaint, each related to an aspect of fashion law. In addition, each student will be assigned to fieldwork placement at a fashion house or other fashion-related company, nonprofit organization, or law firm with a substantial practice in the field of fashion law.
Attributes: EXP, FASL, IPIS, LAWF, LLM.
with each other, with the state, and even with ourselves – in terms of how shape what it means to be human? How will it change our relationships chatbots, and self-driving cars), how will the machine-human interaction automation merely effects discrete tasks (as with voice assistants, lawyer-bots (replacing junior lawyers in document review). Even where “white-collar” jobs – from robo-truckers (replacing long-haul truckers) to new protection Regulation (GDPR). Moreover, as AI is able to automate a wide-range of other forms of technology now shape, curate, and personalize what ideas reaches each individual’s newsfeeds. Through weekly readings and guest speakers, this seminar will explore who gets to decide how to address these thorny issues; the implications for our democracy and individual autonomy; and what mix of government regulation and corporate self-regulation is ideal. These topics are extremely timely, due to discussions in Washington, DC (and elsewhere) over regulation, newly adopted state laws on privacy (notably in California, the home of Amazon recently admitted that a hiring tool it developed to hire skilled tech workers for its digital economy discriminated against women, as AI uses “machine learning” (and “learned” to exclude those who went to women’s college or used “gendered” language on CVs). On the speech front, the problems included not only censorship of speech, but the challenge of “too much” speech – concerning whose speech is heard, the competition for limited attention span, and the question of online hate speech. As for freedom of thought, while the New York Times and other mainstream media have always curated our news and information (i.e., what appears on the front page or in headlines), search engines, social media platforms, and a wide-range of other forms of technology now shape, curate, and personalize what ideas reaches each individual’s newsfeeds. Through weekly readings and guest speakers, this seminar will explore who gets to decide how to address these thorny issues; the implications for our democracy and individual autonomy; and what mix of government regulation and corporate self-regulation is ideal. These topics are extremely timely, due to discussions in Washington, DC (and elsewhere) over regulation, newly adopted state laws on privacy (notably in California, the home of Silicon Valley), and the European Union’s adoption of the General Data Protection Regulation (GDPR). Moreover, as AI is able to automate a wide-range of jobs (with greater speed, efficiency, and precision than humans), machines will increasingly replace humans in both “blue-collar” and “white-collar” jobs – from robo-truckers (replacing long-haul truckers) to lawyer-bots (replacing junior lawyers in document review). Even where automation merely effects discrete tasks (as with voice assistants, chatbots, and self-driving cars), how will the machine-human interaction shape what it means to be human? How will it change our relationships with each other, with the state, and even with ourselves – in terms of how we perform and express our identities online? Attributes: Lawrence J. Bemis, IP and Policy Intern. Law School. The legal profession is not immune to the effects of technological change. This seminar explores the emerging law of digital civil rights and civil liberties. The digital revolution opens up tremendous social and economic benefits, but also involves perplexing challenges, including human rights challenges implicating, inter alia, privacy, equality, free speech, and freedom of thought. With the Edward Snowden and Cambridge Analytica revelations, many observers have asked whether we now, in effect, live in a post-privacy society. Increasingly, the digital economy is built on a surveillance (or information) economy, in which technology companies depend on mining data on our consumer habits (and even our political preferences) so that this information can be sold and monetized, for example to advertisers or political campaigns. On the equality front, we now know that artificial intelligence (AI), big data and algorithms can be used in spheres ranging from predictive policing to the online housing market – whether through facial recognition or other online tools – which can promote online profiling based on race, gender, disability, family status, etc. Amazon recently admitted that a hiring tool it developed to hire skilled tech workers for its digital economy discriminated against women, as AI uses “machine learning” (and “learned” to exclude those who went to women’s college or used “gendered” language on CVs). On the speech front, the problems include not only censorship of speech, but the challenge of “too much” speech – concerning whose speech is heard, the competition for limited attention span, and the question of online hate speech. As for freedom of thought, while the New York Times and other mainstream media have always curated our news and information (i.e., what appears on the front page or in headlines), search engines, social media platforms, and a wide-range of other forms of technology now shape, curate, and personalize what ideas reaches each individual’s newsfeeds. Through weekly readings and guest speakers, this seminar will explore who gets to decide how to address these thorny issues; the implications for our democracy and individual autonomy; and what mix of government regulation and corporate self-regulation is ideal. These topics are extremely timely, due to discussions in Washington, DC (and elsewhere) over regulation, newly adopted state laws on privacy (notably in California, the home of Silicon Valley), and the European Union’s adoption of the General Data Protection Regulation (GDPR). Moreover, as AI is able to automate a wide-range of jobs (with greater speed, efficiency, and precision than humans), machines will increasingly replace humans in both “blue-collar” and “white-collar” jobs – from robo-truckers (replacing long-haul truckers) to lawyer-bots (replacing junior lawyers in document review). Even where automation merely effects discrete tasks (as with voice assistants, chatbots, and self-driving cars), how will the machine-human interaction shape what it means to be human? How will it change our relationships with each other, with the state, and even with ourselves – in terms of how we perform and express our identities online?
IPGL 0602. Intellectual Property and Advanced Technology: Artificial Intelligence and Blockchain. (3 Credits)
Standing at the edge of the next digital revolution, when we already live in the "3A era" of Advanced, Automated, and Autonomous systems, we have to confront major challenges to the existing traditional intellectual property regime as well as other fields of law. The course focuses on advanced technologies including, artificial intelligence (AI), machine learning (ML), robots, aside with blockchain and Bitcoin technology, 3D printing, Natural Language processing, augmented reality (AR), Cyberspace the Internet. The course addresses major challenges and threats arising from these technologies such as intellectual property, privacy and other related legal regimes and will consider theoretical justifications and creative reforms. The course constitutes novel and non-traditional perspectives of the scholarly discourse between advanced digital technologies and intellectual property laws, while addressing a series of novel legal questions, rethinking traditional legal concepts. How do artificial intelligence (AI) systems or blockchain technology actually work? Are AI systems really human-like? Who will be entitled to the ownership benefits of AI generated works and who will be held responsible for infringements and subsequent damages of AI-generated works. Should IP laws be replaced with other tools? Can these systems be subject to legal rights and obligations? Are intellectual property laws relevant when these systems generate artwork or patents? Can regulation, transparency or insurance efficiently control these systems? Why is intellectual property regime important to other fields of autonomous entities (autonomous cars, autonomous weapons and autonomous ADR systems)? When AI systems can replace authors and inventors by autonomously creating and generating innovative and creative works; blockchain technology becomes decentralized and can replace mediators and the governmental registration bodies of intellectual property assets as well as, traditional contracts and enforcement procedures; 3D printing enables everyone to produce massive amount of copyrightable works; Payment may be easily done in electronic currency like bitcoins all around the globe - the future for copyright and patent laws and the role of the courts and other legal entities have become uncertain. <p> The students will gain not only knowledge about IP laws in the US, in other jurisdictions and internationally, as well as, knowledge about contemporary advanced technologies but will also acquire new ways of thinking and practical legal experience. <p> The students of this course have the option to attend an international seminar in the most important intellectual property international organizations: WO-SEWIPO in Geneva; the Swiss Institute of Comparative Law in Lausanne and the IP Summit in Brussels, subject to the approval and conditions of the specific organization. Some of the final works will have the option of being published, under certain criteria. <p> The course will include three academic hours of class presentations per week including consulting and discussions with the students regarding their research. The research paper can satisfy the writing requirement.

Attributes: IPIE, LAWT, LLM, LWR.

IPGL 0615. Cybersecurity Law and Policy Workshop. (3 Credits)
This seminar will introduce students to the significant challenges that government, law enforcement and the private sector face in addressing cybersecurity risks. The seminar will focus on cyber threats that have significant legal, economic and social consequences and threats that jeopardize national security. Students will learn about US technological vulnerabilities, the existing legal and policy framework and the development of new policies to protect US interests including those for cyber-defenses and the protection of civil liberties.

Attributes: CORC, CRCP, INLJ, IPIE, JD, LAWT, LLM.

IPGL 0666. Key Intellectual Property Issues: Past, Present And Future . (2 Credits)
This course will examine important IP issues by looking at how they were viewed by experts and courts in the past, how are they viewed now and what if any changes can be expected in the future. The course materials will be panel transcripts from past and present Fordham IP Conferences in which the issues were discussed, case law and related blogs and law review articles. <p>There is no prerequisite. The first two classes will consist of an overview of IP law. The next six classes will be divided into two classes each for copyright law, trademark law and patent law. There will be some comparison with foreign law.

Attribute: LLM.

IPGL 0693. Blockchain, Virtual Currencies, and Tokens: Business and Legal Issues. (2 Credits)
The course will explore the development of Blockchain as a vehicle for innovation, the legal issues surrounding blockchain projects, and the business cases for both public and private blockchains through the examination of concrete case studies. (This course is cross-listed with the Business School) Paper required.

Attributes: CORC, CRCP, LAWT, LLM.

IPGL 0708. Governing the Algorithmic Society. (2 Credits)
Society is increasingly controlled by algorithms. New technologies based on finding patterns in data are used in choosing who gets jobs, credit, and housing, where to send police, how long people stay in prison, how speech is regulated and opinions influenced. How should society respond? What role does law play in responding to a world increasingly dominated by algorithmic decision-making? What must we understand about the relationship between technology and society in order to answer that question? <p> This interdisciplinary course will explore how algorithmic decision-making challenges some of law's fundamental stated and unstated assumptions. We will begin with a brief introduction to theories of technology, society, and law, which will serve as the analytical frame for the semester. In each week thereafter, we will move through different social and legal environments, such as employment, policing, trials, and injuries from autonomous vehicles, to understand how and why algorithmic decision-making is challenging to govern. The readings will draw on cutting edge research in law, computer science, and social theory, as well as contemporary news articles and opinion pieces. By the end of the semester, we will better understand not just the relationship between algorithms and society, but how to think about the governance of technology generally, which will become ever more important as new technologies develop in the future. <p> Assessment will primarily be based on class participation and a final paper. While a willingness to scrutinize the details of technology is required, no math is required or expected.

IPGL 0730. Blockchain and Smart Contracts. (2 Credits)
Blockchain technology is a challenge for the law. The decentralization and potential anonymity of blockchains are in important respects antithetical to the authority of the law. As a result, blockchain is a difficult technology to govern and is even a possible substitute for the law in some areas. This seminar will focus on these governance and control issues. The seminar will introduce the technology and some applications of blockchain, but it is not intended as a thorough survey of either. Instead, the focus will be on the interplay of blockchain and the law.

Attributes: IPIE, LAWT, LLM, LWR.
IPGL 0781. Fashion Law Drafting. (2 Credits)
Every major fashion brand today is developing and securing its intellectual property – copyrights, trademarks, and patents. In this course, we will review the law and business of fashion licensing, the anatomy of a license agreement, and current trends in the industry in the US and worldwide. Cases regarding copyright and trademark infringement and counterfeiting will be discussed and reviewed. Monthly writing assignments with 1 final paper/presentation. Professor Angela Byun.
Attributes: EXP, FASL, IPIE, LAW, LAWF, LAWT, LLM.

IPGL 0807. Fintech and Artificial Intelligence: Regulatory and Corporate Law Framework. (2 Credits)
"FinTech" and Artificial Intelligence have been innovating many of the services the banking and financial industry provide: New payment, trading and wealth management technologies have been developed, online lending and fund raising is in a process of disruption. Corporations are trying to understand how the use of AI can lead to better decision-making and regulators are pushing ahead. This course introduces students to the US legal framework with a focus on banking and securities regulation as well as some basic corporate law questions. This includes P2P lending, securitised token offerings, crowdfunding and micro lending as well as algorithmic trading, fund management based on algorithmic learning and artificial intelligence, in the boardroom”.
Attributes: CRCP, LAWB, LLM.

IPGL 0811. Digital Copyright. (3 Credits)
Since the mid-1960s it has been apparent that digital technologies would pose significant challenges to the evolution of U.S. copyright law. During the first several weeks of the term, we will focus on studying how courts have analyzed the proper scope of copyright protection for computer programs. Although copyright law does not generally protect functionality, it does protect some literal and nonliteral elements of programs, which are, by definition, virtual machines that happen to be constructed in texts. We will review the major appellate court rulings on software copyright scope, including the controversial Oracle v. Google rulings of the Court of Appeals for the Federal Circuit, which Google is seeking to persuade the Supreme Court to review. A second focus will be on the evolution of rules establishing direct and indirect liability of Internet service providers and technology platforms for infringements committed by third parties. A third focus will be on limiting principles of U.S. copyright law, such as fair use and exhaustion of rights, as applied to digital uses of copyrighted works. Because the European Union has different rules about digital copyright protections, some comparative analysis will also be featured.

IPGL 0991. Fashion Retail Law. (2 Credits)
This course will explore current legal issues related to fashion retailing, from single-brand boutiques to large multi-brand stores. Topics include the following legal practice areas that impact retail companies: vendor relationships; licensing and manufacturing; e-commerce negotiations and agreements; labor and employment; real estate and leasing; advertising; regulatory; litigation; corporate governance and M&A transactions; risk analysis; and other related topics.
