

INFORMATION, TECHNOLOGY, AND OPERATIONS

Overview

The information, technology, and operations (ITO) curriculum equips students with a solid understanding of core technology and operations concepts, rigorous analytical thinking and technical skills, and a creative mindset for problem-solving and decision making. Infused with the partnership with other Gabelli School academic units and incorporating new elements such as sustainability, risk management, and innovation, ITO courses are particularly relevant in today's increasingly interdependent and competitive global economy.

The ITO faculty also has expertise in integrating all aspects of the product and service lifecycle. Their research examines the execution process that ranges from planning, design, and procurement, to production, distribution, and returns.
