Research Practicum

As one of the primary aims of the CRM program is to provide students with rich research experience, each student is required to complete a semester-long practicum in their second year in order to collect data for their M.S. thesis. Therefore, although each student enrolled in the CRM program will be paired with a full-time Fordham faculty member, most students will also receive substantial mentorship from colleagues and affiliates at outside agencies, many of whom maintain collaborative relationships with Fordham faculty.

Practicum sites will be selected based on the student’s interests and goals. For example, a student interested in forensic psychology may complete his or her research practicum at the Kirby Forensic Psychiatric Center, under the primary supervision of that institution’s chief psychologist (who is also an adjunct faculty member). A student interested in health psychology, on the other hand, could complete his or her research practicum at Mount Sinai Medical Center or Memorial Sloan Kettering Cancer Center.
