

CONSTRUCTION MANAGEMENT (M.S.)

Overview

The Master of Science in Construction Management provides students with both the academic and applied analysis, knowledge, and skills necessary for success to compete in the global construction marketplace. The program provides the research-based expertise necessary to solve complex problems in the management of multimillion and billion-dollar construction projects, and aims to develop competencies essential for success and leadership through two levels of course curriculum. The curriculum provides a challenging framework of learning opportunities that blend the best of theoretical and applied analysis, foster experiential learning, and build strong connections to the industry.

CIP Code

52.2001 - Construction Management, General.

You can use the CIP code to learn more about career paths associated with this field of study and, for international students, possible post-graduation visa extensions. Learn more about CIP codes and other information resources.
