**INTERDISCIPLINARY MATH & ECONOMICS MAJOR**

This major, offered jointly by the departments of economics and mathematics, is designed to give the student an excellent background in modern economic analysis and a solid grounding in those mathematical disciplines necessary for a full understanding of economic analysis. Because it both demands and fosters careful reasoning as well as a facility with abstract formulations of problem situations, it is an apt pre-law program. Its high degree of difficulty makes it attractive to business recruiters, and it is particularly appropriate for graduate studies in economics, business, and other applied quantitative fields.

**Program Activities**

Majors in this program are eligible for honors at graduation in interdisciplinary math & economics. Some majors in this program have done internships at banks or investment firms. Such internships are not required and do not count among the four electives in the major.
