PRE-MEDICAL AND PRE-HEALTH

Fordham has a long history of preparing students for medical, dental, veterinary, and other allied health careers. Fordham graduates have been accepted to numerous medical schools, including Harvard, Yale, Cornell, Columbia, New York University, Albert Einstein, Mount Sinai, New York Medical College, Tufts, Creighton, Johns Hopkins, Georgetown, Tulane, Loyola University of Chicago, all of the SUNY medical schools, as well as many osteopathic schools of medicine. Students have also gained admission to many top-tier schools of dentistry, optometry, podiatry, and veterinary medicine.

Students who are participants in Fordham’s pre-health professions program receive both individual and group advising from the pre-health program advisers during their freshman through senior years. Group advising sessions are class specific (freshman, sophomore, junior) and are scheduled to help students plan for significant upcoming events, such as taking the MCAT or DAT. Students are also encouraged to meet individually with the pre-health program advisers to discuss their progress in attaining acceptance into a health professions program.

Health professions programs do not require a specific major, but instead value a breadth of education along with the completion of specific coursework. Students preparing for a doctoral-level health professions career may therefore pursue majors in the natural sciences, social sciences, or humanities.

Post Baccalaureate Pre-medical/Pre-Health Program

The Fordham Post-Baccalaureate Pre-Medical/Pre-Health Program is offered through Fordham School of Professional and Continuing Studies (PCS).

See the Fordham School of Professional and Continuing Studies section of this catalog for further information.

Program Requirements

Pre-Health Professions Program

Students focused on entering a health profession program such as medicine, dentistry, veterinarian medicine, nursing, or other health professional schools will require successful completion of majors-level science coursework and labs. The courses listed below constitute the minimum requirements for a health professional school application:

- One year of Introductory Biology (with lab) OR General Biology (with lab)
- One year of General Chemistry (with lab)
- One year of Organic Chemistry (with lab)
- One year of General Physics (with lab)
- One year of English

In addition, beginning in fall 2012 incoming students who intend to apply to medical school will be required to complete the following coursework, to meet the newly revised competencies for entrance into medical school:

- One semester of Biochemistry
- One semester of Psychology
- One semester of Sociology
- One semester of Statistics

All pre-health students, no matter what their primary fields of study, should master the major concepts and skills of science and mathematics, and are generally advised to take additional upper-level science coursework to help prepare for standardized entrance exams. In addition, some health professional schools may require calculus as a prerequisite; students should check individual programs websites for school-specific requirements.

Students planning to apply to a health professional school are advised to take the appropriate standardized admissions test—MCAT, DAT, OAT, or GRE—in the spring or early summer of the application year at the latest.

Early Admission to Master’s Program

Early Acceptance into the Doctor of Physical Therapy Program (D.P.T.) at the School of Health Sciences and Practice at New York Medical College

Fordham University has an early acceptance agreement with New York Medical College (NYMC), for the Doctor of Physical Therapy degree. This program is designed to prepare competent and caring physical therapists that will be able to skillfully practice in a variety of clinical settings and evolve with changes in the health care system.

For a detailed description of the Doctor of Physical Therapy program at New York Medical College, visit their website at www.nymc.edu/pt. Students pursuing any major are welcome to apply. Applicants to the Early Acceptance Program should have an academic record that includes a grade point average of at least a 3.3 with a balance of coursework in humanities, social science, and natural science, including the following required majors level courses, with no letter grade below a C:

- Introductory Biology (one course with lab) OR General Biology (one course with lab)
- Physics I and II (each with lab)
- General Chemistry I and II, (each with lab)
- Anatomy (one course with lab) and Physiology (one course with lab)
- Psychology (one introductory course and one advanced-level course)
- Mathematics (one course)
- Statistics (one course)

The following courses are recommended, but not required:

- Organic Chemistry
- Human Anatomy

Applicants must also complete more than 50 hours of volunteer experience in two or more physical therapy clinics that serve different type of patients.

Early Acceptance into the Master of Science (M.S.) Program in Speech-Language Pathology at the School of Health Sciences and Practice at New York Medical College

Fordham University has an early acceptance agreement with New York Medical College (NYMC), for the Master of Science program in Speech-Language Pathology. The Speech-Language Pathology program at NYMC is one of the very few such programs located in a medical university setting, and also one of a few programs with a strong focus on public health. For a detailed description of the Master of Science program in Speech-Language Pathology, visit the Program’s website at www.nymc.edu/slp.

Academic Requirements

Although no formal major is required, speech-language pathology is an applied science that requires an aptitude in foundational sciences. Applicants to the Early Acceptance Program should have an academic
shadowing experience, work in numerous nearby hospitals, and gain students to participate in volunteer programs, obtain physician Fordham’s location in New York offers numerous opportunities for Experience

Opportunities to Acquire Clinical and Volunteer Gardens, Albert Einstein College of Medicine, St. Barnabas Hospital, and Wildlife Conservation Society at the Bronx Zoo, the New York Botanical Memorial Sloan-Kettering Cancer Center, Rockefeller University, the station for ecological research), and other nearby locations including doing research at the Louis Calder Center (Fordham’s biological field participating in research projects on campus, Fordham students are also to to many are co-authors on scientific publications and contribute conferences and Fordham's own Undergraduate Research Symposium, the academic year. Many have presented their research at professional research projects not only during the summer months, but also during most recent scientific development. Numerous students are active in undergraduate research programs with faculty and gain exposure to the research opportunities. Fordham students have ample opportunities to participate in undergraduate research programs with faculty and gain exposure to the most recent scientific development. Numerous students are active in research projects not only during the summer months, but also during the academic year. Many have presented their research at professional conferences and Fordham’s own Undergraduate Research Symposium, and still more are co-authors on scientific publications and contribute to The Fordham Undergraduate Research Journal (FURJ). In addition to participating in research projects on campus, Fordham students are also doing research at the Louis Calder Center (Fordham’s biological field station for ecological research), and other nearby locations including Memorial Sloan-Kettering Cancer Center, Rockefeller University, the Wildlife Conservation Society at the Bronx Zoo, the New York Botanical Gardens, Albert Einstein College of Medicine, St. Barnabas Hospital, and the American Museum of Natural History.

Program Activities

Freshman Pre-Health Symposium

The Freshman Pre-Health Symposium is a one-credit course offered in the first semester of freshman year at the Rose Hill campus. In this course, students read widely about diverse issues facing the medical professions. They also explore ways to engage fully in the academic and extracurricular life of the University. In addition, they work in small groups to discuss challenges common to first-year students in pre-professional programs and propose ways to meet such challenges. First-year students in this symposium work with peer mentors and participate in the student pre-health organization meetings (The Laennec Society).

Science Integrated Learning Community (SILC)

First-year science majors and pre-health program students enrolled in science courses have the option to live in the Science Integrated Learning Community (SILC), a residential community on the Rose Hill campus. Freshman science majors and pre-health program students occupy two wings of a freshman dorm. The freshman students living in SILC receive support and peer mentoring from the two science major resident assistants and peer tutors living on the floor. SILC brings together those students who are enrolled in science courses and want to quickly find a support network among their peers. Residents engage in science related activities and participate in events focused on concerns of first-year science students.

Research Opportunities

Fordham students have ample opportunities to participate in undergraduate research programs with faculty and gain exposure to the most recent scientific development. Numerous students are active in research projects not only during the summer months, but also during the academic year. Many have presented their research at professional conferences and Fordham’s own Undergraduate Research Symposium, and still more are co-authors on scientific publications and contribute to The Fordham Undergraduate Research Journal (FURJ). In addition to participating in research projects on campus, Fordham students are also doing research at the Louis Calder Center (Fordham’s biological field station for ecological research), and other nearby locations including Memorial Sloan-Kettering Cancer Center, Rockefeller University, the Wildlife Conservation Society at the Bronx Zoo, the New York Botanical Gardens, Albert Einstein College of Medicine, St. Barnabas Hospital, and the American Museum of Natural History.

Pre-Health Professions Library

The pre-health professions program maintains a library of books focusing on medicine. Most of these books are authored by physicians, but many are written by patients. Some are written by physicians who have experienced medical crises from the patient’s perspective. Students may visit the library in Keating 320, and they may check out books for a period of four weeks.

Laennec Society

The Laennec Society is an organization for students interested in doctoral level health-professional fields. The Laennec Society promotes academic excellence, provides essential information about health-professional occupations, and encourages future healthcare professionals to engage in meaningful service to the community and to each other. The Laennec Society also sponsors lectures by alumni working in healthcare and by admission’s representatives from professional schools. In addition, it shares information from recent graduates about their experiences in professional school. The Laennec Society focuses some of its meetings on issues pertinent to students in a specific undergraduate year. Seniors attend workshops on interviewing skills, while juniors work together to approach professional school exams and the primary and secondary application processes. Sophomores focus on developing leadership in appropriate service, extracurricular, and research activities. Freshmen students are welcome at all meetings and have an opportunity to participate in events targeted to their specific needs.
